

DOCA OFED driver installation on Red Hat Enterprise Linux 9.5

This document provides a brief description of the DOCA OFED 2.10.0 driver installation process on Red Hat Enterprise Linux 9.5 using “dnf” commands.

Prerequisites:

Make sure that the distro InfiniBand drivers are not installed on your system since these RPMs will conflict with DOCA OFED RPMs. If you have setup a repository for RHEL 9.5 RPMs for your system, please execute the following command to uninstall distro InfiniBand RPMs.

```
# dnf group remove “infiniband support”
```

Note: Install python3 as a prerequisite.

Important:

This repository supports the following kernel versions only:

- **5.14.0-503.11.1.el9_5** or any errata kernel version that maintains kABI compatibility with this release.

Installation:

Once you are subscribed to DOCA_OFED repository, execute the following command to install DOCA OFED:

```
# dnf install doca-ofed-2.10.0
```

Note:

To load the new driver modules, either run the following command or reboot the server after DOCA OFED installation.

```
#/etc/init.d/openibd restart
```

Uninstallation:

In case all the DOCA OFED RPMs need to be uninstalled, execute the following command:

```
# ofed_uninstall.sh --force
```
